

ALTER TABLE , JOIN and OTHERs

| See how we're working towards our goals

Have you installed DBEAVER?

1

CREATE A NEW
CONNECTION, IN SQL
WE WILL BE USING
POSTGRESQL

2

INSTALL ALL THE JDBC
LIBRARY FOR
POSTGRESQL

3

SET THE PASSWORD
FOR YOUR
CONNECTION, PAY
ATTENTION AT YOUR
CONNECTION PORT AND
ETC

4

NOW LET'S CREATE THE
TABLE AND
EVERYTHING

ALTER YOUR TABLE

01

After creating the table now try to alter the table

02

Look How the command for postgresql to alter the table

03

try add column in your table

04

Try deleting / drop a column and clean the data, also hange the column name

JOINING TABLE

1

NOW CREATE ANOTHER TABLE

Let's see how to join it

2

**FIND THE DIFFERENCE
BETWEEN LEFT JOIN, RIGHT
JOIN, INNER AND OUTER JOIN**

Have you tried those?

3

**NOW TRY TO CHANGE THE JOIN
AND SEE THE RESULT**

It will probably same if it's in a small
scope of data

DONE

ONGOING

DROPPING TABLE AND TRUNCATE THE DATA

Q1 OF 2025

- Try the command truncate, drop and delete, see the results
- NOTE : TRY THE DROP LAST
